AERO62520 Robotic Systems Design Project

AI and Ownership Statement

Ownership Statement

I/We take full responsibility for the content, accuracy, completeness, and appropriateness of the submitted coursework.

Have AI tools been used in the development of this coursework? Delete as appropriate:

Yes

If the answer is Yes

How have AI tools been used?

Response

- **Brainstorming and project planning:** Generative AI was used to explore ideas for effective teamwork and project organization within a multidisciplinary robotics engineering project, including task allocation, responsibility management, meeting arrangements and communication strategies.

- **Development of team rules and working principles:** AI assisted in generating suggestions for the Workplace Charter, covering professional conduct, mutual respect, accountability, working hours, communication methods, and working language. These suggestions provided a starting point for team discussion and refinement.
- **Conflict prevention and resolution:** AI was used to explore approaches to preventing and managing disagreements during collaborative project work. This included suggestions for addressing minor, moderate, and serious conflicts, escalation procedures, and appropriate university support resources.
- **Document structuring and language improvement:** AI supported the interpretation of coursework requirements, organization of information and improvement of grammar, clarity, and academic writing in the preparation of coursework documents.
- **Human oversight and responsibility:** AI-generated outputs were treated as supporting suggestions rather than final decisions. The

team remains responsible for critically reviewing and verifying the information, adapting recommendations to the project's requirements, and approving the final submitted work.

Which AI tool(s) have you used ?

Response

- ChatGPT (OpenAI)

If content has been generated using AI, provide a list of the prompts used.

Response

- Suggest practical strategies to prevent disagreements within a robotics project team, focusing on transparent communication, regular progress updates and collaborative decision-making.
- Develop a conflict resolution flowchart for minor, moderate and serious conflicts within a university project team, including escalation procedures and appropriate university support resources.
- Review and improve the grammar, clarity and structure of our Workplace Charter and Conflict Resolution Flowchart descriptions while maintaining the original meaning and a professional academic tone.
