AERO62520 ROBOTIC SYSTEM DESIGN PROJECT

WORKPLACE CHARTER

1. Statement of Purpose

This charter states the rules and instructions which Team 6 members will follow during the Robotic Systems Design Project. It shows the expectations for each member. We will use it as a reference point for conflict management and our work process.

2. Statement of Principles and Commitments

As a team, we are expected to be respectful to each other to ensure every member in Team 6 has a comfortable working environment. As we are not all from the same academic background, we should not expect everyone to possess the same knowledge and should be patient when explaining to others. To achieve our ultimate goal in the robotic system design project, we must put what we had learnt previously into practice and present viewpoints from various aspects.

3. Team Rules

- **Working hours**

  The working days and hours in Team 6 run from Monday to Friday, 09:00 – 18:00 (excluding public holidays). Work-related messages sent outside the working days and hours may wait until the next available working period. Every member is expected to spend at least 3 hours a week, excluding lecture time, on group coursework to ensure every milestone and deadline is met.

- **Language**

  English should be the only language used for tasks, meetings, and decisions.

- **Modes of communications**

  a) **Meetings:** In the first 30 minutes of the lab session, we should have a short discussion of what each member has done on the weekdays. Other members are allowed to express their thoughts, whether in agreement or opposition.

  b) **Messages:** We are using WhatsApp as our main communication tool at a distance. Members can send messages more casually but must avoid aggressive words.

  c) **Files:** We will use Microsoft Teams or Microsoft Outlook to share the files. Each member should upload the work promptly and use clear file names when necessary.

- **Workload distribution**

  Every task should be broken down into smaller subtasks and be assigned. The member in charge needs to check whether the workload is reasonable and the time given is enough. Besides, the member must raise problems immediately or give a direct and positive response to show understanding and agreement with the work instructions. Members must follow the instructions and finish the work on time. If any

issues arise during the work process, reports are necessary to ask for help or to postpone the deadline.

- **Gantt chart and milestone**

  We will use a Gantt chart and milestones to control working progress. If we do not meet the listed requirements, an extra meeting will be held to identify the problems we are facing and find a solution.

4. Daily Activity Conflict Avoidance

a) **Do** respect others: Prevent any language and actions that may be considered abusive, discriminatory, or harassment.

b) **Do** discuss before making any decisions: Kindly explain the concept to every member, then decide by consensus.

c) **Do** finish your work on time: Anxiety and anger arise when things go uncontrolled. Therefore, to preserve a comfortable and kind working environment, please keep all work under control and finish it on time.

d) **Do** reply to group messages: Forgetting to read and reply to group messages may cause an information gap. It is acceptable not to reply to work messages outside the working period, but remember to reply on the next workday.

e) **Do not** blame others: It is the first time for us working as a group with this topic and equipment. It is completely normal for problems to arise, just simply come up with a solution!

f) **Do not** leave anyone out: Every member is valuable in the team and should never be overlooked.

5. When Conflict Arises

To avoid letting things escalate informally, we will go through the conflict resolution flowchart (refer to the document “2026_10_16_Team6_CWK1WC_ConflictResolution Flowchart_v01.pdf”) to identify the conflict level and then take the corresponding action to solve the problem.

Team 6 members (Student ID / Name):
